Reviewer’s report

**Title:** Robot-assisted laparoscopic reconstructed management of multiple aneurysms in renal artery primary bifurcations: A Case Report and literature review

**Version:** 0  **Date:** 06 May 2017

**Reviewer:** Mohamad Hamady

**Reviewer's report:**

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

This is an interesting case report of robotic assisted surgical repair of two renal artery aneurysms.

It is a useful technique that provides alternative to open surgery.

However, the authors should mention percutaneous interventional radiological approach which includes; stent assisted coiling, covered stents, liquid embolization, balloon assisted liquid embolization. These techniques are well established minimally invasive techniques and cannot be ignored.

**Are the methods appropriate and well described?**
If not, please specify what is required in your comments to the authors.

Yes

**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.

Unable to assess

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
