Reviewer’s report

Title: Should manual detorsion be a routine part of treatment in testicular torsion?

Version: 1 Date: 22 May 2017

Reviewer: Mark Ball

Reviewer's report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

the authors have adequately addressed most of my comments and the comments of the other reviewer. However, the conclusions still need to be tempered. to say "This seems to be an efficient and reliable procedure that should be performed in every patient immediately after diagnosis, as a part of the treatment" based on a retrospective study where MDT was used in 20 patients is extremely overstated. The authors should consider a statement like "MDT is a simple procedure that may be performed safely with little to no delay in definite scrotal exploration and orchiopexy, which remains the gold standard".

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
Please indicate the quality of language in the manuscript:
