Title: Traumatic penile amputation: A case report

Version: 1 Date: 28 Jun 2017

Reviewer: Kelly Healy

Reviewer's report:

The abstract is well written and easy to follow. However, the remainder of the manuscript contains numerous grammatical, punctuation, and wording errors which prevent effective communication. Additional points of concern:

1. There is redundancy in the text. For example, page 3, line 15-16 "The part was cleaned with normal saline..." and line 24 "The amputated part was washed with normal saline..."

2. The bulk of the case report should focus on technique of replantation. However, the authors omit several key points such as details of suture selection in lines 34 and 44 (what size?).

3. Line 51: Please clarify whether the heparin was IV or SQ. Presumably, this was IV not SQ but it warrants clarification.

Are the methods appropriate and well described?
