Reviewer’s report

Title: Unilateral pedal lymphangiography plus computed tomography angiography for location of persistent idiopathic chyle leakage not detectable by ordinary contrast computed tomography

Version: 0 Date: 04 Dec 2017

Reviewer: Hans Heinzer

Reviewer's report:

The authors present an interesting diagnostic tool for a rare disease. My main concern is the low number of patients and the missing control group. The success rate by 100% is notable. The question is not answered by the data, if this is due to the sensitivity of the diagnostic tool or would surgery alone lead to the same results.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
