Title: Fungaemia caused by obstructive renal candida bezoars leads to bilateral chorioretinitis: a case report

Version: 2 Date: 18 Nov 2017

Reviewer: Jean Philippe Haymann

Reviewer’s report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

In their work entitled "Fungaemia caused by obstructive renal candida bezoars leads to bilateral chorioretinitis: a case report" , J Stein et al. show an unusual case report of renal fungal bezoar with bilateral chorioretinitis and no sinusitis in a non immunodeficient lady. The case report is easy to read and outlines the need to perform a systematic funduscropy evaluation even in asymptomatic patients.

- I think it would be interesting to replace figure 2 which shows the ureteroscopy view (which is blurred and doesn't bring many information), by the CT scan image showing left renal obstruction: presence of air (emphysematous pyelitis?)? density of the mass in Hounsfield units?

- The fact that renal drainage was not performed at admission should be commented in the discussion

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review? If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
