Reviewer’s report

Title: Langerhans cells in hypospadias: An analysis of Langerin (CD207) and HLA-DR on epidermal sheets and full thickness skin sections

Version: 0 Date: 15 Aug 2019

Reviewer: Kentaro Mizuno

Reviewer's report:

General comments:

On the hypothesis that developmental differences in epithelial embryogenesis, the frequency or morphology and consequently also the function of epidermal and dermal Langerhans Cells (LCs) in patients with hypospadias, authors have investigated the number of LCs in the sheets and skin section derived from the patients with and without hypospadias. In the present study, LCs are present in similar frequencies and with comparable morphology and distribution in patients with hypospadias as compared to children without penile malformations.

Specific comments:

1. This paper is well-written, structured article. However, in the first place, is it likely that the number of LCs could be varied by the status of sample preparation, for example, past history of balanoposthitis?

2. Authors described that patients' characteristics are presented in Table 1. However I could not find out Table 1.

3. In discussion section, authors described that as there was no difference in LC frequency, we conclude that preoperative androgen application does not prompt LC migration by a topical inflammatory response. But, dermal or epidermal environment would be variable depends on the duration of preoperative hormonal therapy. Authors should indicated the lag time from hormonal therapy to hypospadias surgery in each case.
Please confirm that you have included your review in the ‘Comments to Author’ box?

As a minimum standard, please include a few sentences that outline what you think are the authors’ hypothesis/objectives, their main results, and the conclusions drawn. Your report should constructively instruct authors on how they can strengthen their paper to the point where it may be acceptable for publication, or provide detailed reasons as to why the manuscript does not fulfill our criteria for consideration. Please supply appropriate evidence using examples from the manuscript to substantiate your comments. Please break your comments into two bulleted or numbered sections: major and minor comments.

Please note that we may not be able to use your review if no comments are provided.

Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included as text in the ‘Comments to Author’ box.

Yes

Are the methods appropriate and well described to allow independent reproduction of experiments?

Please state in the ‘Comments to Authors’ box below what you think are the strengths and weaknesses of the methods (study design, data collection, and data analysis), and what is required, if anything, to improve the quality of reporting.

Yes

Does the work include the necessary controls?

If not, please explain in the ‘Comments to Author’ box below.

Yes

Are you able to assess the statistics?

- Are the statistical test(s) used in this study appropriate and well described?

- Is the exact sample size (n) reported for each experimental group/condition (as a number, not a range)?

- Are the description of any error bars and probability values appropriate?

- Are all error bars defined in the corresponding figure legends?

- Has a sample size calculation been included, or a description and rationale about how sample sizes were chosen?

Please can you confirm which of the following statements apply to your statistical assessment of the manuscript (Please include details of what the authors need to address in the ‘Comments to Author’ box):
I have been able to assess all of the statistics in this manuscript (please refer to checklist above)

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in the ‘Comments to Author’ box below.

Yes

Quality of written English
Please indicate the quality of language in the manuscript:

Needs some language corrections before being published

Should the manuscript be highlighted for promotional activity?

Articles that are deemed of interest to a broad audience can be promoted in a variety of ways. This could be through email updates, postings on the BioMed Central homepage, social media, blogs and/or press releases. Please indicate in the text box below whether you think this manuscript should be considered for promotional activity, indicating your reasons why (e.g. what is the most newsworthy aspect of the research).

No

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests.
