**Reviewer’s report**

**Title:** Impact of Case Volume per Year on Flexible Ureteroscopy Practice: An Internet Based Survey

**Version:** 0 **Date:** 22 Oct 2019

**Reviewer:** Mustafa Kadihasanoglu

**Reviewer's report:**

The authors aimed to report current worldwide variation in techniques and clinical practice of flexible ureteroscopy among endourologists of different case volumes per year. A number of issues need to be clarified by the authors:

1. The title does not reflect the conclusion of the manuscript.
2. The abstract is formatted in accordance with the journal style.
3. The abstract describes the paper. However, the last sentence of conclusion is not clear. It should be revised.
4. The abstract stand on its own as an adequate description of the research reported in the manuscript.
5. The introduction is not enough. It should include information on upper urinary tract stones and its treatments. Moreover, the importance of experience should be emphasized in introduction.
6. The study aim is clearly stated.
7. Please use shock wave lithotripsy before SWL.
8. The method section is not divided into appropriate subheadings. For example, study design, participants, survey, statistical analysis.
9. The authors have not provided a clear rationale for their selection of statistical analysis. Statistical analysis section is not enough.
10. The results section is not divided into appropriate subsections.
11. The tables are easily interpretable.
12. The study results have been clearly summarized.
13. The prior works have been cited and critiqued.
14. The authors should discuss clinical implications of their findings.

15. The authors should delete t test from statistical analysis. Because they did not use it.

Please confirm that you have included your review in the ‘Comments to Author’ box?
As a minimum standard, please include a few sentences that outline what you think are the authors’ hypothesis/objectives, their main results, and the conclusions drawn. Your report should constructively instruct authors on how they can strengthen their paper to the point where it may be acceptable for publication, or provide detailed reasons as to why the manuscript does not fulfill our criteria for consideration. Please supply appropriate evidence using examples from the manuscript to substantiate your comments. Please break your comments into two bulleted or numbered sections: major and minor comments.

Please note that we may not be able to use your review if no comments are provided.

Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included as text in the ‘Comments to Author’ box.

Yes

Are the methods appropriate and well described to allow independent reproduction of experiments?
Please state in the ‘Comments to Authors’ box below what you think are the strengths and weaknesses of the methods (study design, data collection, and data analysis), and what is required, if anything, to improve the quality of reporting

Yes

Does the work include the necessary controls?
If not, please explain in the ‘Comments to Author’ box below.

Yes

Are you able to assess the statistics?
- Are the statistical test(s) used in this study appropriate and well described?
- Is the exact sample size (n) reported for each experimental group/condition (as a number, not a range)?
- Are the description of any error bars and probability values appropriate?
- Are all error bars defined in the corresponding figure legends?
- Has a sample size calculation been included, or a description and rationale about how sample sizes were chosen?

Please can you confirm which of the following statements apply to your statistical assessment of the manuscript (Please include details of what the authors need to address in the ‘Comments to Author’ box):

I have been able to assess all of the statistics in this manuscript (please refer to checklist above)

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in the ‘Comments to Author’ box below.

Yes

Quality of written English
Please indicate the quality of language in the manuscript:

Acceptable

Should the manuscript be highlighted for promotional activity?
Articles that are deemed of interest to a broad audience can be promoted in a variety of ways. This could be through email updates, postings on the BioMed Central homepage, social media, blogs and/or press releases. Please indicate in the text box below whether you think this manuscript should be considered for promotional activity, indicating your reasons why (e.g. what is the most newsworthy aspect of the research).

No

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?
4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

No
