Reviewer’s report

Title: Gluteal hidradenitis suppurativa presenting pemphigus-like findings: case report

Version: 1 Date: 30 Apr 2019

Reviewer: Chaokai Hsu

Reviewer's report:

The authors reported a 68-year-old male with gluteal acne conglobata with coincidental pemphigus findings. The case is very interesting. Though there was no result of DIF examination, the pathological findings and ELISA results fully supported the claimed diagnosis. The quality of the English is suboptimal, and need further revision.

Minor suggestions:

1. We report a case of 68-year-old male with a diagnosis of gluteal acne conglobate that showed pemphigus findings";" the acantholysis and the desmglein autoantibodies. - ", including"

2. Gluteal acne conglobata with pemphigus findings "have" not been - has

3. The detailed information of the ELISA kit should be addressed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
