Reviewer’s report

Title: Optic glioma and precocious puberty in a girl with neurofibromatosis type 1 carrying an R681X mutation of NF1. Case report and review of the literature.

Version: 0 Date: 24 Oct 2015

Reviewer: Carla Bizzarri

Reviewer's report:

The case report is interesting and well written.

A few minor criticisms:

Tanner stage for breast development is expressed a B1 -> B2.... not as M2.

Growth hormone hypersecretion has also been described in children with NF1 and optic pathway glioma (associated or not with central precocious puberty). It could be useful to add GH levels (if possible not only basal levels, but GH secretion after glucose oral tolerance test) and IGF-I levels to the description.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
