Reviewer’s report

Title: Type B insulin resistance syndrome with Scleroderma successfully treated with multiple immune suppressants after eradication of Helicobacter pylori infection: a case report

Version: 0 Date: 28 Jan 2016

Reviewer: Mosaburo Kainuma

Reviewer’s report:

The authors reported that treatment for H pylori may be helpful in relieving type B insulin resistance syndrome for H. pylori positive patients. This case is very helpful for other physicians by showing that eradication of H. pylori infection leads to dramatic improvement of the control of glucose. However, before acceptance, Table 3 of the clinical course should be changed to a figure so that it can be understood more clearly.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
