Reviewer’s report

Title: EXTENDED CLINICAL FEATURES ASSOCIATED WITH NOVEL GLIS3 MUTATION: A CASE REPORT

Version: 0 Date: 19 Nov 2016

Reviewer: Carl Bortner

Reviewer’s report:

Very interesting and well written report describing a patient with a novel GLIS3 deletion whose clinical phenotype includes abnormal external genitalia. The authors conclude that infants with neonatal diabetes associated with dysmorphism that includes abnormalities in the external genitalia should be screened for GLIS3 mutations. This conclusion is supported in this case study of a single patient. However, the authors should consider commenting on the occurrence of external genitalia abnormalities (bifid scrotum, bilateral undescended testicles, microphallus, scrotal hypospadias) observed in the absence of GLIS3. This would give a greater perspective in light of the novel and important observation presented by the authors.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
