Title: VARIATIONS IN DIABETES REMISSION RATES AFTER BARIATRIC SURGERY IN SPANISH ADULTS ACCORDING TO THE USE OF DIFFERENT DIAGNOSTIC CRITERIA FOR DIABETES

Version: 0 Date: 11 Apr 2017

Reviewer: Delia Bogdanet

Reviewer's report:

As mentioned in my word document review, the purpose of the study was to compare two sets of criteria and the degree of correlation between them. I don’t feel the data and the results can lead to the recommendation that one criteria should be used over another. Maybe one should just comment on the actual similarity/differences between them. An in depth analysis of length of diabetes, insulin use and the new oral medication (GLP1, SGLT2) would help clarify some of the questions in this study. There are a few other comments in the document attached.

A very nice study. Looking forward to the 10 year follow up.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
