Title: Prolonged Preoperative Treatment of Acromegaly with Somatostatin Analogs May improve Surgical Outcome in Patients with Invasive Pituitary Macroadenoma (Knosp grades 1-3): A Retrospective Cohort Study conducted at a Single Center

Version: 0 Date: 2017-03-30

Reviewer: Marek Bolanowski

Reviewer's report:

This is very interesting and important from the practical point of view study on efficacy of the preoperative somatostatin analogs in acromegaly. There is no consensus on the routine preoperative analogs applications, but it is everyday practice in some countries. My concerns regard:

1. different numbers of groups compared,

2. no clear information on the selection of the patients to the groups compared,

3. the conclusions are not properly derived from the results obtained.

In my opinion a manuscript is too long.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
