Title: Effectiveness and safety of exenatide in Korean patients with type 2 diabetes inadequately controlled with oral hypoglycemic agents: an observational study in a real clinical practice

Version: 0 Date: 16 May 2017

Reviewer: John Doupis

Reviewer's report:

The authors of this manuscript investigated the effectiveness and safety of exenatide in Korean patients with type 2 diabetes inadequately controlled with oral hypoglycemic agents. The manuscript is nicely written and the results are valid and in accordance with the so far available literature. Although the topic and the results are not novel, real world data are always useful. It would be nice if the authors included the information about the sample size and details in the methods section of the manuscript. Additionally, it would be interesting if authors included data about waist circumference to possibly detect exenatide effect on visceral obesity.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
