Adenosine Deaminase activity in type2 Diabetes Mellitus

My comments are:

1- Before of the start, this research need to give samples from healthy subjects and compare to type2 Diabetes Mellitus.
2- Methods for assay of serum ADA and (HbA1c) is short and need to explain more.
3- In the manuscript (abstract, result) and tables need to write in (units) for ADA & another items.
4- The mechanism of action ADA need to write in.
5- What is the name of kit for ADA activity?
6- What is the aim of table 2?
7- Table 3 is not clear and must be elimination.
8- Table 6 must be more explanation.

Finally: I think this manuscript is weak and is not proportion for publish in your journal.
