Reviewer’s report

Title: Short Stature as a Presenting Symptom of Attenuated Mucopolysaccharidosis Type I: Case Study and Clinical Insights

Version: 0 Date: 26 Sep 2018

Reviewer: Alia Ahmed

Reviewer’s report:

According to author's comment in the discussion and conclusions section, page 8 between lines 14 to 16, Juvenile idiopathic arthritis was the most common incorrect diagnosis made. Then why not MPS screening may start from the rheumatologist or orthopedist? Why author is emphasizing only on endocrinologist?

Don't you think to emphasize on newborn screening (NBS) awareness is more important than anything else? Do you have any comments on NBS?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
