Reviewer’s report

Title: The Captopril Challenge Test for Diagnosing Primary Aldosteronism in a Chinese Population

Version: 0 Date: 28 Apr 2019

Reviewer: Franco Veglio

Reviewer’s report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

The study is clinically well performed, but the results on post-CCT ARR test are not novel and mainly confirmatory.

The only original data of the paper are that PAC suppression percentage after CCT recommended by current clinical guidelines (>30%) is not applicable when diagnosing Chinese subjects with PA.

The interest of this topic is restricted to Chinese population.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
