Reviewer’s report

Title: The Effect of Mild Agonist Stimulation on the Platelet Reactivity in Patients with Type 2 Diabetes mellitus

Version: 0 Date: 10 Sep 2018

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: The scope of this study is adequate and study study objectives are clear. The study design, execution, and interpretations are acceptable but I suggest a few minor revisions for improvement as indicated in subsequent section of this evaluation.

REQUESTED REVISIONS:
Methods: Under participants, the description 'studied statistical society' is not clear what it implies. The authors need to describe the type of sampling they are referring to under blood collection and the units of concentration of ADP might be not depicted accurately i.e it is indicated μm but maybe should be μM. In results section, the fold depicted in Figure 4 need to be defined that this was in comparison to baseline in the figure caption for it to be adequate and it is also not very clear what the description of 'resting platelets' in the caption indicates in reference to the figure.

ADDITIONAL REQUESTS/SUGGESTIONS:
None

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
