Reviewer’s report

Title: AN ATYPICAL AND BILATERAL PRESENTATION OF CHARCOT FOOT DISEASE

Version: 0 Date: 05 Apr 2019

Reviewer: Abd Tahrani

Reviewer's report:

The case is useful but it is not as a typical as the manuscript suggest. Could the authors please address the following points:

1. Was nephrotic syndrome ruled out at the time of the presentation? I appreciate the diagnosis was CNO, but she might have had nephrotic syndrome contributing to the swollen ankles.

2. Did the patient have any symptoms or signs of autonomic neuropathy outside the foot at time of presentation

3. Please detail the patient drug history and her retinopathy and nephropathy status at presentation

4. Why the patient did not have a total contact cast or an "irremovable" air cast when the non compliance was identified?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
