Title: Diabetes insipidus and panhypopituitarism as a first presentation of silent adenocarcinoma of lung: a case report and literature review

Version: 0 Date: 28 Jun 2019

Reviewer: Olcay Evliyaoglu

Reviewer's report:

I have reviewed the manuscript entitled 'Diabetes insipidus and panhypopituitarism as a first presentation of silent adenocarcinoma of lung: a case report and literature review' . In this report 72 years old woman presented with panhypopituitarism due to pituitary metaseses due primary adenocarcinoma of lung. Isolated pituitary metasases of the primary lung tumor can be interesting. This manuscript can be published after the revisions below made:

In the case report section; serum osmolality should also be given. Serum osmolality is assumed > 300mOsm/kg before giving desmopressin.

In discussion section; although the most common site for metastases is posterior pituitary, in the presented case anterior pituitary is also involved. Involvement of the both parts of the pituitary should be discussed. Why are both sites involved, what is the risk factors for this patient?
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
