Reviewer’s report

Title: Assessment of anterior-posterior spinal curvatures in children suffering from hypopituitarism

Version: 0 Date: 29 Jul 2019

Reviewer: Iwona Gowacka

Reviewer's report:

Kobylin et al. present their data about anterior-posterior spine curvature of short grown children, diagnosed with pituitary hypopituitarism.

The research group consisted of 9 girls and 24 boys, it's too big gender difference and comparison parameters between groups doesn't make a sense.

Unfortunately this study is not conducted well and doesn't give answer to the scientific question. The prospective study of studied group and control group would give the answer to the scientific question.

It's difficult to clarify what disturbed body posture in study conducted by authors (hormone therapy or lack of activity)

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
