Reviewer’s report

Title: Factors for successful weight loss after bariatric surgery. Are there really any predictive factors for a successful weight loss after bariatric surgery? : Results from a group of severely obese patients

Version: 1 Date: 15 Dec 2019

Reviewer: Mauro Lombardo

Reviewer's report:

The review of the paper has made it more readable and interesting. However, many points remain unclear. The assessment of nutrition in subjects is not standardised. The 24-hour recall in super obese patients is certainly not reliable. The differences between the two groups are not well explained. The results shown are poor and confusing. The limits should be specified better. We are on track for publication but the paper needs further revision.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
