Reviewer's report

Title: Early childhood caries in Switzerland: a marker of social inequalities

Version: 2 Date: 22 June 2015

Reviewer: Ratilal Laloo

Reviewer's report:

Major Compulsory Revisions

The changes made are generally fine, however I would have preferred that Table 2 included the findings for the overall sample, and then separately for the Swiss and Non-Swiss sub-samples. Also need to state that Prevalence Ratio, with 95%CI and which significance test in the analysis section.

In table also need to state the figures in [ ] are 95%CIs.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
