Reviewer’s report

Title: Craniofacial fibrous dysplasia associated with McCune-Albright syndrome: Challenges in diagnosis and treatment: Case reports

Version: 2 Date: 09 Jul 2019

Reviewer: Reviewer 2

Reviewer's report:

REVISION ASSESSMENT FROM THE ACADEMIC PEER REVIEWER:

Has the author addressed your concerns sufficiently for you to now recommend the work as a technically sound contribution?

Yes

Reviewer comments: The authors have addressed the comments sufficiently to the maximum.

REQUESTED REVISIONS:

However the assessment of growth hormones was essential in these case reports owing to the nature of the disease which was not done. The authors themselves have recommended a team approach for the treatment of such cases which again was not followed.

Histopathological picture of the lesion is not included.

References were not increased.

On page 10 the authors have written that "other than the precocious puberty in the first case, these patients had not been diagnosed with any other endocrinopathies. This line seems misleading as I would say that it is authors mistake as they did not evaluate the patients of these grounds. Please correct. Growth hormone levels were not evaluated by the authors.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No
**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.

No

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in your comments to the authors.

Yes

**Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?**
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
