Reviewer’s report

Title: Anti-Inflammatory Effects of Olanexidine Gluconate on Oral Epithelial Cells

Version: 1 Date: 08 May 2019

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER ASSESSMENTS:

OBJECTIVE - Full research articles: is there a clear objective that addresses one or several testable research questions? (Brief or other article types: is there a clear objective?)

No - there are minor issues

DESIGN - Is the current approach (including controls and analysis protocols) appropriate for the objective?

No - there are minor issues

EXECUTION - Are the experiments and analyses performed with sufficient technical rigor to allow confidence in the results?

No - there are minor issues

STATISTICS - Is the use of statistics in the manuscript appropriate?

Yes - appropriate statistical analyses have been used in the study

INTERPRETATION - Is the current interpretation/discussion of the results reasonable and not overstated?

No - there are minor issues

OVERALL MANUSCRIPT POTENTIAL - Has the author addressed your concerns sufficiently for you to now recommend the work as a technically sound contribution? If not, can further revisions be made to make the work technically sound?

Probably - with minor revisions
GENERAL COMMENTS: Three concerns remain in terms of the response of the authors to the review. 1. There is still a disconnect between the observation that OLG inhibited biofilm formation and the inhibitory activity of OLG on cytokine release. Plaque biofilms form by the accretion of gram-positive bacteria on the salivary pellicle. Cytokine release is primarily stimulated by gram-negative bacteria. 2. The authors failed to adequately establish the purity of the LPS. Was the commercial preparation at least tested for contamination with proteins? 3. Additional controls, were not used to establish that the OLG inhibition was specific for P. gingivalis LPS. It would have been a simple experiment to also test LPS from E. coli. Based on the results this would have allowed the authors to make more specific and interesting conclusions.

REQUESTED REVISIONS:

1. Add assays to show the purity of the LPS.
2. Also test the inhibitory activity of OLG with E. coli LPS.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:

Declaration of competing interests

Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.
