Reviewer's report

Title: Cervical cancer screening program in Thimphu, Bhutan: population coverage and characteristics associated with screening attendance

Version: 3 Date: 27 September 2014

Reviewer: Peter Sasieni

Reviewer's report:

I assume that the 500 women who did not participate are ALL invited women who did not participate. If so please make this clear in the Methods section. If not several of the results become unreliable (eg the proportion of all "home" women ever screened) - please revise accordingly.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
