Reviewer's report

Title: Relationship between Type-D Personality, Physical Activity Behaviour and Climacteric Symptoms

Version: 1 Date: 1 December 2014

Reviewer: Deborah Legorreta

Reviewer's report:

MINOR ESSENTIAL REVISIONS.
1. In the participants section, although Mean & SD are given, the actual age range of simple participants is not clear.
2. Including women that had undergone hysterectomy and oophorectomy in the sample and classified as peri or post menopausal without objective hormonal levels results leads to less accurate and valid results. I would strongly advice the authors to simply remove the cases.

Page 10, line 15. "Only two of the demographic...related to climacteric symptomatology" Do they mean to general climacteric symptomatology?

Page 14 requires proof-reading.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
