Reviewer’s report

Title: The influence of the rs1137101 genotypes of leptin receptor gene on the demographic and metabolic profile of normal Saudi females and those suffering from polycystic ovarian syndrome

Version: 2 Date: 14 Jan 2018

Reviewer: Singh Rajender

Reviewer's report:

I found the study to be well conducted and a straight association study. This methods are appropriate and results are well presented. In the introduction, rather than mentioning about the controversy among association studies, I would suggest the authors to mention that no study (if so) has been conducted on Saudi Arabian women. That would make a case for this investigation.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
