Title: FAMILY PLANNING AMONG UNDERGRADUATE UNIVERSITY STUDENTS: A CASE STUDY OF A PUBLIC UNIVERSITY IN GHANA

Version: 2 Date: 13 Jul 2018

Reviewer: Gabriel Gulis

Reviewer's report:

Dear authors,

you declare that you explained why 100 respondents and how were they selected. But you do not do this! You write "The study population included all males and females between 15-49 years of age living in Effutu Municipality"; how big is this study population in total? Is it 1000? or 10000? or 15478? You shall provide the total number!

Then you write "A multistage sampling technique was used to select respondents for the study." How exactly did you do the multistage sampling? Can you provide a flowchart for it with numbers and inclusion/exclusion criteria described?

Next you write "As per the estimated sample size calculated, a total of one hundred (100) respondents..."; how did you calculate the estimated sample size? Can you provide the formula, or the reference to the sample size calculation formula?

This is a major issue to be able to assess validity of your findings; it needs to be described clearly!

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
