Title: Pathological profiles and clinical management challenges of breast cancer emerging in young women in Indonesia: a hospital-based study

Version: 0 Date: 23 Sep 2018

Reviewer: Assaad Kesrouani

Reviewer's report:

The subject is of interest and could shed light over breast cancer epidemiology.

There is however some flaws in the methodology. Selection bias is not appropriately addressed by the authors. A tertiary center usually gets the 'bad' and younger patients; could this be the case in Indonesia? Is there any correlation with the country' statistics regarding this question?

How many patients were referred and how much were followed by the center.
