Reviewer's report

Title: Double burden of malnutrition among ever-married women in Bangladesh: A pooled analysis

Version: 1 Date: 19 Sep 2018

Reviewer: Xiaoyan Iris Leng

Reviewer's report:

This is much improved version of the manuscript. Thanks for taking the effort. After reviewing the paper, I still have the following comments:

1. On page 8, line 30, "The BDHSs constructed wealth index variable by principle component analysis (PCA) using data on selected household assets." The authors might want to provide reference(s) for this statement.

2. One page 13 line 58, "... marital status were positively correlated with being underweight and negatively correlated with being overweight and obese" I would suggest saying "not being married were positively associated with being underweight....."

3. For Table 2, the overall p-values for the multinomial logistic regression should be provided.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
