Reviewer’s report

Title: Do endometrial lesions require removal? A retrospective study

Version: 1 Date: 16 Jan 2019

Reviewer: Hazem Al-Mandeel

Reviewer's report:

Thank you for such study. No doubt that such study is important but it’s a retrospective study which can be somehow biased.

Issues with the study include:

- The background is missing more relevant and big studies. Please check for other references.

- The method did not describe well the main points in methodology such as inclusion and exclusion criteria, justification for the chosen period (2013 to 2015), sample size needed and others.

- Did all women underwent hysteroscopy and why?

- The statistics section is generic and irrelevant

- Although the results are detailed they are confusing and most of them are difficult to understand.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
