**Reviewer’s report**

**Title:** Vaginal douching in Zambia: A risk or benefit to women in the fight against cervical cancer: A retrospective cohort study

**Version:** 2  **Date:** 12 Aug 2019

**Reviewer:** Johannes Berkhof

**Reviewer's report:**

The manuscript has been improved a lot. My only suggestion is to keep the wording as neutral as possible when presenting the results of Table 3.

For instance,

"Adjustment variables included age, condom use, occupation, number of sexual partners and HIV status".

=&gt; "Independent variables included ... ".

"After adjusting for potential confounders, douching with either vinegar .... "

=&gt; After adjusting for other independent variables, douching with either vinegar ....

I trust the authors in making these minor changes.

**Are the methods appropriate and well described?**
If not, please specify what is required in your comments to the authors.

Yes

**Does the work include the necessary controls?**
If not, please specify which controls are required in your comments to the authors.

Yes

**Are the conclusions drawn adequately supported by the data shown?**
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English  
Please indicate the quality of language in the manuscript:
