Reviewer's report

**Title:** In Vitro Anti-proliferative Activity of Argemone gracilenta and Identification of Some Active Components

**Version:** 3  
**Date:** 30 September 2014

**Reviewer:** Rémy Bertrand TEPONNO

**Reviewer's report:**

I checked the revised manuscript and I noticed that some corrections have been made. Nevertheless, the assignment of 1H and 13C chemical shifts of argemonine (Figure 2) is still unclear. The authors can send the NMR spectra of this compound (1D and 2D) if you agree so that I contribute in the chemical shifts assignment of this compound.

I am unable to decide on acceptance or rejection.
