Reviewer's report

Title: Methanolic leaf extract of Otostegia integrifolia Benth reduces blood glucose levels in diabetic, glucose loaded and normal rodents

Version: 4 Date: 10 November 2014

Reviewer: Ana E Andreazzi

Reviewer's report:

Major Compulsory Revisions

Even after author's corrections, the experimental design remained unclear. The follow questions still should be answered:

1) How long were the animals treated with the plant extracts? Was the administration chronic or acute?

2) Authors should explain why they used different animal species (mice and rat) but they did not performed all experimental procedures in both species.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
