Title: Excessive Use of dangerous forms of Alternative medicine by the Saudi patients with neurological disorders: skin cauterization and bloodletting

Version: 5 Date: 24 October 2014

Reviewer: kamal-Eldin Abou-Elhamd

Reviewer’s report:

Minor Essential Revisions
Dear Editor

I reviewed the revised article titled Pattern of Traditional Medicine Use by Adult Saudi Patients with Neurological Disorders

I thank authors for their response to the comments but they add the conclusion to the discussion part and it is better to be separate, so I recommend its publication after very minor revision

My comments:
1. The conclusion should be separate section after discussion section
2. The second statement in conclusion should be rephrased because it is not English
3. Abbreviations should not be used in conclusion as TM
4. References in the text were written in new way for example: (1,2,3,4) and it should be in this way (1-4), (9, 10, 11) should be (9-11) and many
5. Pages of references should be written in same manner, they sometimes write: 21-5 in first one, then: 339-45 in second ref. , 4081-6 in third ref. and so on
