Reviewer’s report

Title: Sasang Constitution Affects the Incidence of Functional Dyspepsia

Version: 2 Date: 1 April 2015

Reviewer: Bo-Hyoung Jang

Reviewer’s report:

This is the research between functional dyspepsia (FD) and Sasang constitutional medicine (SCM) in Korea. Some comments are...

- There isn't when you had recruited subjects in this manuscript.
- It is lack of information on Sasang constitutional analytical tool (SCAT), such as validation study result of advance research, how to evaluate, and so on.
- 'incidence'? I think 'prevalence' is more proper. If this FD is first event during research period, incidence is right. But there isn't any information about whether 'incidence' is right in this manuscript.
- After result of FD distribution among SCM, and so what? It is needed what meaning and interpretation is that results.
- I think this result is limited under adult of 18-65 age. Like this, detail limitation is needed.
- What future research is needed? Please male concrete plan of future research.
- All of 'significance' is just 'statistical' significance of exploratory study.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
