Reviewer’s report

Title: Immunomodulatory effects of preparations from Anthroposophical Medicine for parenteral use

Version: 4 Date: 21 January 2015

Reviewer: Salvatore Chirumbolo

Reviewer’s report:

Minor essential revisions

Although this revised version fulfilled many of the recommendations forwarded by this Reviewer, some issue has not fully addressed. The authors used Gaussian approaches for statistical evaluation without having assessed if their sample distribution was normalized. However, this Reviewer welcomes the valuable effort to demonstrate an in vitro biological activity of AM and evaluates this paper as a good contribution in the field.

Minor spelling revision and English grammar check is requested

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

None. I have no conflict of interest to declare.
