Reviewer's report

Title: Acupuncture at homotopic acupoints exerts dual effects on bladder motility in anesthetized rats

Version: 4 Date: 16 April 2015

Reviewer: Cun-Zhi Liu

Reviewer's report:

Minor Essential Revisions.
1. Statistical analysis was described that data was analyzed by a paired t-test or one-way ANOVA. However, data was only analyzed by a paired t-test in figures.
2. Bladder motility with or without acupuncture in the active state of bladder was shown in figure 1 (a). MA 1min was marked at the bottom of the picture. In my opinion, with or without acupuncture should be marked in the contractile wave. It is the same for figure 2 (a).

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
