Title: Evaluating the antidiabetic effects of Chinese herbal medicine: Xiao-Ke-An in 3T3-L1 cells and KKAy mice using both conventional and holistic omics approaches

Version: 1 Date: 29 April 2015

Reviewer: samad alimohammadi

Reviewer's report:

The base and novelty of this article #Evaluating the antidiabetic effects of Chinese herbal medicine: Xiao-Ke-An in 3T3-L1 cells and KKAy mice using both conventional and holistic omics approaches# is so good but I have some question:

(1). It was better that author explained about the 3T3-L1 cells and KKAy mice in Background section.

(2). Are there similar to previous work in this area in order to compare your work with theirs?
