Reviewer's report

Title: Vasorelaxant effects of Angelica dahurica on isolated rat aortic rings

Version: 2  Date: 15 June 2015

Reviewer: Junbao Du

Reviewer's report:

The present study investigated the role of Angelica dahurica on isolated rat aortic rings. The contents are interesting and the results are novel. The following are the comments.

Major:
1. The authors are in need of increasing the contents of intracellular Ca conc.
2. The relationship of Ca concentration with vasoactivity is needed to test.
3. The figures are in poor quality.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

No.
