Title: Modulation of Expression of Heat Shock Proteins and Apoptosis by Flueggea leucopyrus (Willd) decoction in three breast cancer phenotypes.

Version: 4 Date: 23 June 2015

Reviewer: R Narayanan

Reviewer's report:

Comments:

All major comments are addressed. I would like to appreciate the attention however, these minor issues needs to be addressed. The manuscript could be accepted after these minor revisions.

Minor edits:

1) The authors should try not to go back and forth between the different graphs in a figure but proceed from a)-b)-c) etc., or, jump back and forth between graph as done in Figure 2 and 3. Such phrasing makes it difficult to follow.

2) Provide statistical values, not just p<0.05. Also in figures represent, what are the significances referring to and which groups?
