Reviewer's report

**Title:** Effect of Tualang honey on the healing of anastomotic wound in large bowel anastomosis in rats-A randomized controlled trial

**Version:** 3  **Date:** 23 November 2015

**Reviewer:** Scott Sell

**Reviewer's report:**

The authors made a number of corrections to their original manuscript and improved its overall quality. However, while the authors do mention budgetary constraints, this reviewer would have liked to see an expansion of data included (i.e. collagen matrix quantification / histology, tensile strength of non-operated controls, varying time points for evaluation, etc.).

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
