Reviewer’s report

Title: A Pilot Single Centre, Double Blind, Placebo Controlled, Randomized, Parallel Study of Calmagen® Dermaceutical Cream and Lotion for the Topical Treatment of Tinea and Onychomycosis

Version: 0 Date: 04 Nov 2016

Reviewer: Shari Lipner

Reviewer's report:

The authors present a study of calmagen cream for the treatment of tinea and onychomycosis. Their study is well defined with clear objectives and endpoints. The data is presented clearly and the discussion is relevant. The paper would benefit from photos showing before and after photos for the onychomycosis patients. The discussion should also comment on the consistency of the lotion and cream and how it compares to currently used lacquers for onychomycosis.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
