Reviewer’s report

Title: Thai plants with high antioxidant levels, free radical scavenging activity, anti-tyrosinase and anti-collagenase activity

Version: 1 Date: 13 Sep 2017

Reviewer: Ephrem Engidawork

Reviewer's report:

- Authors addressed by and large my concerns, except that the aqueous extract could have still been obtained by boiling with water the residue following extraction by the organic solvents.
- The asterix shown in Table 5 and 6 need to be explained as a footnote below the Table. For example, it says significantly different from the control. Does control refer to the two standards used? If so, I do not expect a difference between the ethanol extract of Ardisia elliptica Thunb. and the standard chemical used.
- The language still needs revisiting.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
