Title: Ginkgo Biloba Induced Mood Dysregulation: A Case Report

Version: 0 Date: 11 Oct 2017

Reviewer: Sarada Subramanian

Reviewer's report:

Comments to authors:

In this case report, authors report a case of mood dysregulation associated with use of ginkgo biloba in a patient with schizophrenia. The patient was maintained in remission with isperidone 2 mg monotherapy for the past 2 decades, starting from the time of diagnosis. To address the cognitive discomfort in the patient, ginkgo biloba was administered, only after acetyl carnitine failed to ameliorate the mood dysregulation. In this regard, further studies would be useful for supplementing their findings.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
