Reviewer's report

Title: A retrospective analysis of breast cancer subtype based on ER/PR and HER2 status in Ghanaian patients at the Korle Bu Teaching Hospital, Ghana

Version: 4 Date: 3 April 2015

Reviewer: Annegien Broeks

Reviewer's report:

2-3-2015:
I am satisfied by the answers given however:
1. I would like to see a remark about BRCA1/2 mutation status in the studied population and possible bias caused in the result
2. TN patients with BRCA1 mutations or BRCA like tumors can profit from PARP inhibition treatment, please mention in the discussion.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
