Reviewer's report

Title: Family Physicians Enhance End-of-Life Care: Evaluation of a New Continuing Medical Education Learning Module in British Columbia

Version: 2 Date: 16 March 2015

Reviewer: Jamie Meuser

Reviewer's report:

No major revisions proposed.

Minor essential revision (or discretionary revision) requested: The authors should address the question of why they chose, for the self-report assessment of knowledge and skills, aspects of care that reflect on process (e.g. presence/absence of a registry, participation in shared care, development of an action plan) or communication skills (e.g. initiation of a conversation on EOL planning, support of patients and families during terminal phases and after death), but chose not to address potential gains in other clinical skills (e.g. confidence and effectiveness in symptom control, comfort and skill with analgesic choice and dosage, relevant procedural skills). Although the variables selected for measurement are, without a doubt, important, those not selected are equally important and equally amenable to assessment through self-report.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
