Reviewer's report

Title: What do they need to know? Achieving consensus on paediatric musculoskeletal content for medical students.

Version: 2 Date: 8 November 2014

Reviewer: Liza McCann

Reviewer's report:

I think that this manuscript is well written, is based on sound methodology and shows important outcomes for Medical Student training.

The authors undertook a robust 2-phase study, including focus groups, interviews and a literature review to inform a 2-stage Delphi process in round 2, with no attrition between round 1 and 2 to inform a consensus-based curriculum for medical students.

The question posed is well defined, the methods are appropriate and well described, and the data are sound. Figures and tables are appropriate and the manuscript adheres to relevant standards. The authors clearly acknowledge past work and the title and abstract convey what has been found.

Unusually for me, I do not have any suggestions for revision of this manuscript.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
