Reviewer's report

Title: What do they need to know? Achieving consensus on paediatric musculoskeletal content for medical students.

Version: 2
Date: 2 March 2015

Reviewer: CRAIG EBERSON

Reviewer's report:

This was an interesting look into what is a large scale problem in medical education. The authors attempted to form a consensus opinion as to what should be tough at the medical school level to prepare primary care physicians to recognize potentially serious MSK issue. Overall this represents good work.

I had the following concerns, however:

1. the initial focus group was overwhelmingly composed of medical students. I would argue that the students' opinion as to what is relevant for them to learn is, in fact, irrelevant. please clarify the role of the medical students (Maj comp revision)

2. unsure of the value of educationalists in determining the content for the students (discret revision)

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
